

Phishing Email Analysis Report

Objective

To analyze a suspicious email sample and identify phishing characteristics.

Sample Email Summary

The email claims to be from a bank requesting urgent verification of account details due to suspicious activity.

Phishing Indicators Identified

- Spoofed sender email address (support@secure-bank-alert.com).
- Urgent and threatening language pressuring immediate action.
- Suspicious hyperlink redirecting to a fake login page.
- Mismatched URL when hovered over the link.
- Poor grammar and spelling mistakes.
- Request for sensitive information such as password and OTP.
- Email header analysis showed discrepancies in sender domain.

Header Analysis Findings

The return-path domain does not match the displayed sender address. SPF and DKIM checks failed, indicating possible spoofing.

Risks Associated

- Credential theft
- Financial loss
- Identity theft
- Malware infection
