

Phishing Email Analysis Report

This report presents an analysis of a suspicious email sample to identify common phishing indicators. Phishing emails attempt to trick users into revealing sensitive information such as login credentials, bank details, or personal data by pretending to be legitimate organizations.

Objective

To examine a suspicious email sample and identify characteristics that indicate a phishing attempt.

Tools Used

- 1 Email client or saved email text file
- 2 Online email header analyzer
- 3 Web browser for link inspection

Sample Phishing Email

Subject: Urgent! Your Account Has Been Suspended

Dear User,

We detected unusual activity in your account. Your account will be suspended if you do not verify your information immediately.

Click the link below to verify your account:
<http://secure-verification-login.com>

Failure to verify within 24 hours will permanently suspend your account.

Thank you,
Security Team

Phishing Indicators Identified

- 1 Suspicious sender email address that does not match the official domain.
- 2 Urgent and threatening language used to pressure the user into quick action.
- 3 Mismatched URL directing users to a suspicious website.
- 4 Grammar and spelling mistakes present in the email content.
- 5 Request for sensitive information through an external link.

Conclusion

The analyzed email contains several clear phishing indicators including spoofed sender details, urgent language, suspicious links, and grammatical errors. Users should avoid clicking unknown links and always verify the sender before providing sensitive information.
